## PLASTIC REPAIRS & RESTORATION

**R**eplicate the original look & finish utilizing UV protective coatings to extend the life above & beyond factory limits. We use the latest methods in plastic welding *not just* epoxies and glues. We utilize a process that strengthens & reinforces the damaged sections. Under normal conditions it will not crack again. Some plastic grilles cracked by impact but many by vibration and overtorque. We make every effort to find the exact plastic to manufacture the piece or pieces that are missing on your grille, console, door panels or dash bezels. Different plastics expand and contract at different rates so it is imperative that the same type plastic is used in the repair so that the expansion/contraction rate is the same and will not crack and/or split when the required pieces are added

## STAINLESS REPAIRS & BUFFING

**A**ll dents, scratches and imperfections that all the years of living have provided your vehicle, are removed. We make certain that your stainless pieces are straight or contoured, whichever is correct. We thoroughly clean the pieces before working on them even the underside; they can then be put directly on your vehicle. The highest quality compounds available are used to reconstruct the original factory luster.

## ELECTRICAL SPECIALTY

**C**hris specializes in electrical diagnostics including rebuilding of electrical harnesses & upgrading wiring. This upgrading will enable the use of tachs and other accessories that were not original equipment but a desired addition by many of our customers. We upgrade the gauge of the wire when necessary to enhance the load carrying ability. All electrical connections are repaired and we can trace wiring harnesses with our specialized equipment. On high load circuits we also install self resetting circuit breakers so you're not stranded if a fuse blows.

## RETRACTABLE CONVERTIBLE TOP ELECTRICAL REPAIRS

**E**xperiencing top problems because of electrical issues can be annoying and ruin your chances of enjoying your convertible. The intricate and involved diagnostics of the retractable convertible can be a challenge at the best! Chris has many years of experience in the diagnostics and proper operation of the retractable; including the motors, switches, circuit relays, hydraulics, self resetting circuit breakers and worm gears. T-Birds, Lincolns, Mercedes, BMW and others have intricate electrical circuitry to provide proper operation of the convertible top.
